

SCOURGUARD® 4(K)

COST EFFECTIVE - GENTLE - PROVEN

**FAST
FACTS**

ScourGuard 4(K) is a broad spectrum **calf scours vaccine**.

INDICATIONS

For vaccination of healthy, pregnant cows and heifers.

ScourGuard 4(K) aids in preventing diarrhoea in calves by increasing antibodies in colostrum against bovine Rotavirus (serotypes G6 and G10), bovine coronavirus, and *E.coli*.

FEATURES

- Cow and user friendly subcutaneous injection
- Tissue friendly – fewer injection site lumps in cows & safer for users than oil based vaccines
- Broad spectrum Rotavirus control - New Zealand's first Rotavirus G6 & G10 vaccine
- Clinically proven & trialled in New Zealand
- In use shelf life of 63 days
- Nil With-holding period

ADMINISTRATION

For subcutaneous or intramuscular injection.

Dose: 2mL.

VACCINATION SCHEDULE

- Previously unvaccinated heifers or cows should receive two doses at least 3 weeks and up to 9 weeks apart, with the second dose given 2-12 weeks prior to calving.
- Annual booster re-vaccination is with a single dose 2-12 weeks prior to each subsequent calving.
- Can be given as an annual booster vaccination to animals vaccinated with Rotavec® Corona in the previous year.
- In seasonal calving herds, booster vaccination should be given 2-4 weeks before the planned start of calving to cover all calves born in the first 8-10 weeks of calving.

COLOSTRUM MANAGEMENT

Ensure all calves receive approximately 4L of first milking colostrum (or 10% of bodyweight), within 12 hours of birth.

PACK SIZES

100mL plastic bottle (50 doses).

STORAGE

Store between 2°C and 8°C. Refrigerate. Do not freeze. Protect from light.
